Division of Intramural Population Health Research (DIPHR)
Epidemiology Branch
Postdoctoral Fellowships

The Epidemiology Branch is an intramural research program within DIPHR at the Eunice Kennedy Shriver National Institute of Child Health and Human Development. The branch’s mission is to conduct original research focusing on human reproduction, pregnancy, maternal and child health. Branch scientists are internationally recognized as leaders in these areas, and are recruiting multiple post-doctoral fellows interested in male and female fertility and reproduction, fetal growth and development, pregnancy complications (e.g., gestational diabetes, preterm birth, preeclampsia), environmental factors that impact reproductive health, genetics (statistical genetics, genetic epidemiology), birth defects, nutrition and lifestyle, obesity, type 2 diabetes, cardio-metabolic disorders, developmental origins of disease (neurodevelopment, cardio-metabolism, epigenetics), health disparities, and epidemiological methods.

Our interdisciplinary program is designed to provide experiences that foster the development of skills necessary to conduct independent research and to cross-train fellows in related disciplines, such as reproductive and perinatal epidemiology, endocrinology, pediatrics, genetics, nutrition, and statistics. Postdoctoral fellows have the opportunity to develop their own research initiatives within the mission of the branch using the wealth of data from available cohorts. The branch website has details on its research.

In the Epidemiology Branch, we are seeking applicants with a range of analytical, technical, and clinical skills who are ready to tackle great challenges and make an impact on the lives of women, men, and children. Candidates legally approved to work in the United States with an earned doctoral degree in epidemiology, genetics, or a closely related field and those with a medical degree and advanced graduate training in epidemiology, population health, or biostatistics earned within the past five years are invited to apply. Preference will be given to candidates with demonstrated research interests in areas currently under investigation in the branch and to candidates with superior analytic and communication skills. Salary is commensurate with training and relevant research experience. The position also provides paid health insurance and transportation benefits. Multiple positions are available and will remain open until qualified applicants are found.

Applicants should send: 1) a curriculum vitae; 2) a statement of research interests to be pursued during training; 3) three letters of reference; and 4) transcripts for undergraduate and graduate degrees to the contact listed below. Note: Official transcripts may be requested if selected for an interview. Applicants
need not have completed their doctoral training prior to applying, although training must be completed prior to the start of the fellowship.

Dr. Pauline Mendola  
Epidemiology Branch, DIPHR/NICHD/NIH  
6710 Rockledge Blvd., Rm 3119 MSC 7004, Bethesda, MD 20892  
Email: pauline.mendola@nih.gov

Applications received before February 1, 2018, will be given priority, but applications will be accepted until all available positions are filled.
